INTEGRATED CREDIT CARD PROCESSING

Overview offers completely integrated credit card processing using our Credit Authorization Concentrator (WinAut) and one of several middleware credit card processing software options. Choose from IcVerify, ProtoBase, Shift4, Nectar (UK) or Payware (UK) just to name a few. For more information on these middleware software programs click below.

ICVERIFY

IcVerify is software that is designed for enterprise-class merchants with higher volumes or multiple lines of business including authenticated e-commerce, recurring, and point of sale environments. IcVerify is designed to handle multiple users and multiple merchants, yet is cost-effective for smaller merchants wanting to invest in a highly scalable solution. With IcVerify you have the option of dial-up for smaller-scaled merchants, internet for mid-range merchants and larger users and also frame-relay connections. IcVerify was designed to support even the largest transaction of volumes (up to 20 transactions per second, sustained load).

PROTOBASE

ProtoBase enables your Point of Sale, ASP or billing system to communicate properly with your third party processor or processing bank. ProtoBase works using SofTrans modules that are designed to comply with the requirements of each third-party processor and acquirer. ProtoBase also can develop custom modules to meet your specialized needs. ProtoBase with SofTrans software supports extensive industry payment vehicles including: credit cards, travel and entertainment cards, commercial cards, private label cards, debit/ATM cards, frequency cards, checks, stored value cards, electronic gift certificates, purchase cards, electronic credit applications and more. SofTrans is available for dial-up and many high speed communication methods like TCP/IP and Frame Relay.

SHIFT4

Shift4's Dollars on the Net serves as a real-time payment gateway between a merchant's point-of-sale system and their bank/processor, making sure that transaction data is correctly collected and translated in order to ensure that transactions qualify for the best possible discount rates. Dollars on the Net provides a comprehensive accounting application with the ability to report, review and correct transactions before settlement to minimize monthly times. Also a 24-month archive of all transactions and comprehensive reporting features allow users to defend against costly charge back quickly and effectively.
